

### What is FotoRenu™ Skin Rejuvenation?

FotoRenu™ Skin Rejuvenation is one of the newer forms of facial rejuvenation. Unlike lasers, which use collimated, focused light, FotoRenu™ uses intense broadband light. Although FotoRenu™ delivers energy to both the superficial (epidermis) and deep (dermis) layers of the skin, the epidermis is spared from damage. Thus, there is virtually no recovery time. In the studies that have been performed, FotoRenu™ treatments have been shown to smooth the skin and improve the appearance of age spots, freckles and even visible blood vessels. FotoRenu™ Skin Rejuvenation may also tighten skin and improve fine lines.

### What areas can be treated with FotoRenu™ Skin Rejuvenation?

FotoRenu™ treatments are typically performed on the face, neck, chest, shoulders and hands. However, any body area that has succumbed to the signs of photo-aging can be treated.

### Will FotoRenu™ Skin Rejuvenation treat Rosacea?

Yes. Although not a cure, FotoRenu™ Skin Rejuvenation can substantially improve the symptoms of Rosacea—excessive flushing, broken blood vessels, inflammatory acne and enlarged pores. In fact, FotoRenu™ is considered the gold standard for treating Rosacea. A series of FotoRenu™ treatments can have a significant impact on the quality of life for those who suffer from Rosacea.

### What can I expect during treatment?

Before treatment, a cold gel is applied to the area being treated and you are given protective eyewear. During treatment, your Reveal™ clinician will apply the surface of the FotoRenu™ hand piece to the skin. Very bright pulses of therapeutic light will then be delivered to the skin surface in a systematic fashion until the entire area is covered.

### How long does the procedure take?

Each session usually lasts about 30 minutes, followed by a warm feeling in the treated area afterward. You may return to your normal activities immediately after treatment, but may wish to apply mineral makeup prior to leaving the center.

### What can I expect post-treatment?

You may experience mild redness, but it often disappears within a few hours. Brown spots may darken immediately after treatment, and areas of redness may intensify. Excessive post-treatment redness often calms within a few hours. Within the next day or so, darker spots may develop a fine flaky covering that will shed over the course of the next few days to reveal the fresh, even skin underneath.

### What improvements can I expect?

FotoRenu™ Skin Rejuvenation brings about gradual changes over the course of the treatments. After the series of treatments is complete, you should notice improved skin texture, decreased redness, more even color and a more youthful skin tone.

## How many FotoRenu™ treatments will I need?

On average, five FotoRenu™ treatments are recommended, scheduled at three-week intervals. However, each person is unique and during your complimentary consultation, your Reveal™ membership advisor will guide you in creating a treatment program that best meets your individual needs and goals.

## How long will the results last?

With good sun protection (SPF 30) and Reveal's customized at-home skincare regimen, results from a full series of treatments can last up to several years.

## How should I prepare for my treatments?

Avoid tanning (sun bathing or tanning bed) while undergoing your series of FotoRenu™ treatments, since your skin will be more susceptible to over-reacting to the intense light. Your Reveal™ clinician will recommend a companion at-home skincare program to enhance and maintain your results.

## Are there any risks or side effects associated with FotoRenu™ Skin Rejuvenation?

Because FotoRenu™ does not damage the epidermis, side effects are generally limited to mild discomfort during the procedure and post-procedure redness and skin sensitivity. While there is no true recovery or "downtime", pigmentation spots may temporarily darken as discussed, and some individuals may feel more comfortable covering these areas with mineral makeup.
