

## What is the Reveal™ Peel?

The Reveal™ Peel is a powerful yet gentle chemical exfoliation treatment that helps fight the effects of time, sun and environmental damage. There are two versions of the peel, one formulated for the face and one for the body. Both peels are formulated to smooth, firm and hydrate while simultaneously evening skin discoloration. The facial peel is a special formulation that includes a unique blend of peeling agents: alpha-hydroxy acids, beta-hydroxy acids, resorcinol and retinoic acid (obtained by physicians only). The body peel is specially formulated for skin that differs from facial skin in its texture, pH balance, and density. The body peel's active blend of trichloroacetic, lactic and salicylic acids is an excellent choice for treating arms, legs, back, chest, hands and feet. While results are predictable and noticeable after just one peel, best results are seen after a series of peels. This is a highly effective rejuvenation procedure with no downtime and mild, controllable post-procedural peeling.

## How does the Reveal™ Peel work?

Both Reveal™ Peels use a unique blend of safe but effective acids to cause chemical exfoliation of the epidermis (the outer layer of the skin). Skin regeneration following this chemical peel results in a fresh, healthy epidermis. After a series of peels, the result is a smoother, more even complexion, a decrease in oil and acne, tighter pores, a decrease in discoloration and redness and a decrease in fine lines and wrinkles, with an improvement in skin texture.

## What skin issues does Reveal™ Peel treat?

Both Reveal™ Peels improve the skin's overall appearance, texture and tone and are beneficial in treating a range of issues, from acne to the dullness that often accompanies aging skin. The Reveal™ Peel is effective for pigment changes caused by acne scarring, photo damage (sun damage), "age spots", melasma (from hormone changes) and post-inflammatory hyperpigmentation. They are particularly effective in combination with other treatments such as FotoRenu™ Skin Rejuvenation.

## What will my skin feel like during and after my Reveal™ Peel?

During your Reveal™ Peel, you will experience a warm, tingling sensation. After the peel, you may feel that your skin is temporarily dryer than normal. This is a very typical sensation, and we advise using a heavier moisturizer as needed.

## How long does Reveal™ Peel take?

A Reveal™ Peel of the face or hands is generally performed in less than 20 minutes. Larger body areas like the chest, back, arms and legs may take up to an hour.

## How long after the Reveal™ Peel may I return to normal activities?

You may return to normal activities immediately following your Reveal™ Peel. You may experience mild redness or tingling following your peel. One to three days following your treatment, you will notice mild to moderate peeling of the skin that can be concealed with the consistent use of a moisturizer. While Reveal™ Peel is a rejuvenation procedure with no downtime, we do ask that for the first few days following the peel, you be diligent about protecting your skin by avoiding hot-tubs, chlorinated pools and significant sun exposure.
